Influencer Engagement and Sponsorship Coordination Platform

Modern App Development I Project

Name: Shahbaz Ali
Roll Number: 21f1001662

Overview:

The Influencer Engagement and Sponsorship Coordination Platform (IESCP) is a web application designed to bridge the gap between sponsors seeking to promote their products or services and influencers capable of reaching target audiences. By providing a centralized platform, the project aims to streamline the process of campaign creation, influencer discovery, ad request management, and performance tracking.

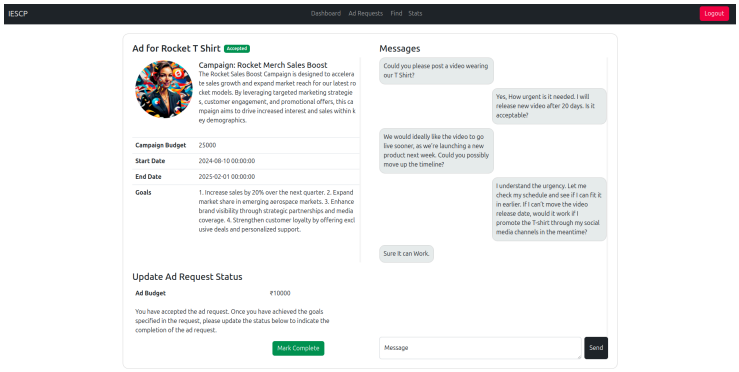

Fig: Ad Request

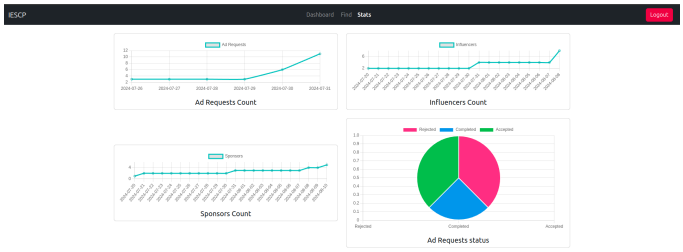

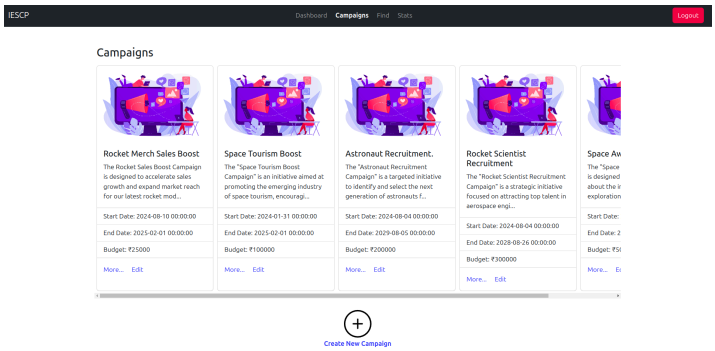

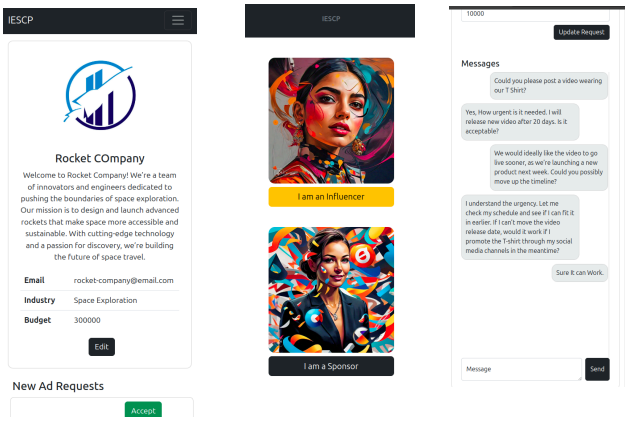

Fig: Stats Page

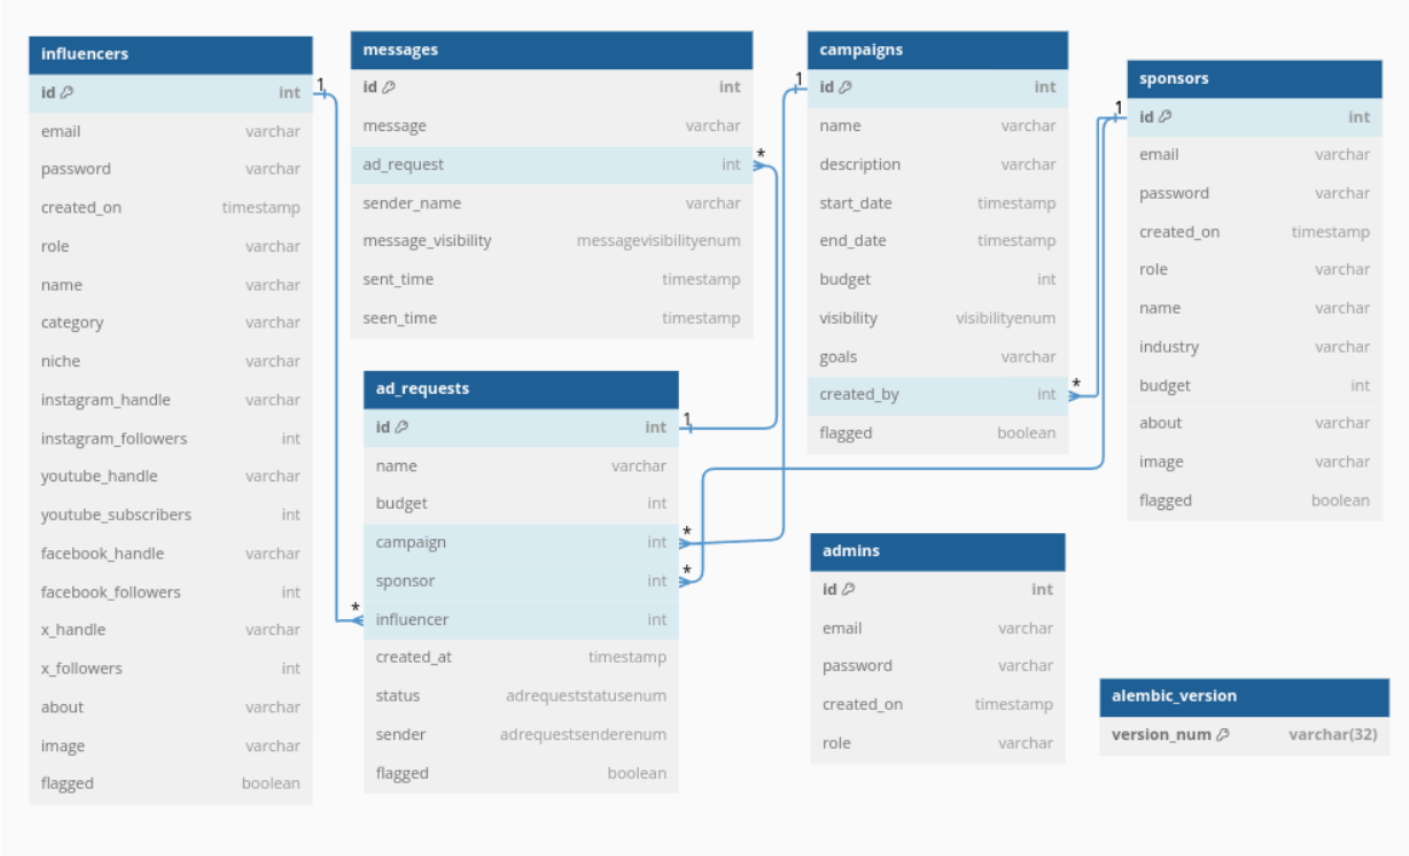

Approach:

After understanding the project's needs, a robust database schema was designed to manage relationships between sponsors, influencers, and campaigns. A role-based authentication system was implemented, and then dashboards for admin, sponsor, and influencer were created. Development started with the Sponsor module, followed by the Campaign module, and then the Ad Request module to facilitate interactions between sponsors and influencers. User registration and a messaging system were added for communication and negotiation. Core functionalities for managing ad requests and search/filtering capabilities were implemented. Finally, a statistics page was developed to provide insights into platform performance.

Technology Used:
The platform was developed using a combination of Python and web technologies.

1. **Flask:** For application code and backend development
2. **Jinja2 Templates + Bootstrap:** For HTML generation and styling
3. **SQLite and Postgres:** For data storage and management

ER Diagram:

Features:

1. Role Based Authentication using flask_login
2. Messaging between Sponsor and Influencer
3. Responsive Design, Mobile friendly
4. Frontend and Backend validations
5. Utilized Chart.js for showing charts.
6. Admin flagging and deletion system
7. Creation, updation and Deletion of Campaigns, Ad Requests
8. Accept, Reject, mark Complete or Negotiate Ad requests.
9. Search and filter on multiple criterias.
10. Simple to use interface.
